

Job description

Join our innovative team at DocuVille. We are revolutionizing document processing through cutting-edge Generative AI technology. We are in the early stage of product development and looking for a self-learning and motivated software development intern with hands-on experience. It will be a paid internship, and the person would receive the required mentoring as an intern, work remotely, and help junior and senior software engineers in component design, coding, testing, and deployment of software.

Responsibilities:

- Assist in the development and maintenance of our GenAI-based document processing software.
- Collaborate with senior engineers to design, implement, and test new features.
- Write clean, efficient, well-documented code in multiple programming languages in, including JavaScript/TypeScript, React.js, Node.js, and Python.
- Participate in code reviews and contribute to team discussions on best practices.
- Support deployment and monitoring of applications in cloud environments (AWS/Azure/GCP).

Qualifications

- Pursuing or Holding a Bachelor's degree in Computer Science, Software Engineering, or a related field.
- Familiarity with front-end technologies (React, TypeScript) or back-end technologies (Node.js, Python).
- Basic understanding of cloud services (AWS, Azure, or GCP).
- Knowledge of programming languages such as Python and Go is a plus.
- Strong problem-solving skills and willingness to learn.
